Curriculum overview

Subject	Combined Science (Trilogy & Separate)		Year group	11
Vision statement:	<p>At Landau Forte our curriculum exists to ensure all students regardless of background and ability have the opportunity to unlock their potential. We are committed to students being challenged from their previous key stage learning experiences. Our broad and balanced curriculum is ambitious, coherently planned and sequenced, and will provide the platform for preparing students with the foundations for examination success.</p> <p>Our Curriculum Intent has been informed by a wide variety of researchers and is steeped in evidence based research. Christine Counsell summarises the aspiration of our curriculum to empower all learners creating a pathway to success in university, their career and life:</p> <p><i>'A curriculum exists to change the pupil, to give the pupil new power. One acid test for a curriculum is whether it enables even lower attaining or disadvantaged pupils to clamber into the discourse and practices of educated people, so that they gain powers of the powerful.'</i></p> <p>As well as excellent academic success we aim to ensure our students leave us as polite and well-rounded young adults. Our new core values of Compassion, Courage and Curiosity are currently being embedded throughout our curriculum offer to ensure we continue to meet our social, emotional, spiritual and moral obligations.</p>			
Curriculum intent:	<p>In line with the Academy's vision to enhance students' understanding of the world by ensuring an educational journey guided with care and compassion the Science department at Landau Forte Academy QEMS aim to deliver a curriculum that not only develops students' knowledge and understanding of the subject but inspires them to succeed far beyond their education at the academy.</p> <p>The science curriculum aims to be;</p> <ul style="list-style-type: none"> ○ Aspirational ○ Ambitious ○ Coherent both in planning and sequence ○ Adapted successfully to suit all needs and abilities ○ Broad - covering not only aspects of the subject but how this can be taken into the outside world <p>In delivering the knowledge based curriculum students will be able to not only achieve the best they can academically but also link theory to reason, understand why they learn about specific concepts, grasp how this fits into the world of careers and ultimately develop the skills and reasoning needed to become well rounded individuals. The curriculum aims to give students a range of opportunities within the classroom and beyond allowing them to become confident and articulate in their scientific ideas. Consistently high expectations of both students and teaching staff ensures that every individual in Science has access to the highest quality of teaching and learning possible and working with key stakeholders ensures that our students have every opportunity to achieve.</p> <p>In summary the Science curriculum is developed and tailored for each specific year group taking into account the demographic of our students. The intention of which is to allow students to think deeper and use knowledge based skills within their learning both in science and throughout their lives.</p>

<p>KS2 National Curriculum summary:</p>	<p>The principal focus of science teaching in upper key stage 2 is to enable pupils to develop a deeper understanding of a wide range of scientific ideas. They should do this through exploring and talking about their ideas; asking their own questions about scientific phenomena; and analysing functions, relationships and interactions more systematically. At upper key stage 2, they should encounter more abstract ideas and begin to recognise how these ideas help them to understand and predict how the world operates. They should also begin to recognise that scientific ideas change and develop over time. They should select the most appropriate ways to answer science questions using different types of scientific enquiry, including observing changes over different periods of time, noticing patterns, grouping and</p>

classifying things, carrying out comparative and fair tests and finding things out using a wide range of secondary sources of information. Pupils should draw conclusions based on their data and observations, use evidence to justify their ideas, and use their scientific knowledge and understanding to explain their findings.

Pupils should read, spell and pronounce scientific vocabulary correctly.

Working scientifically

During years 5 and 6, pupils should be taught to use the following practical scientific methods, processes and skills through the teaching of the programme of study content:

- planning different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary
- taking measurements, using a range of scientific equipment, with increasing accuracy and precision, taking repeat readings when appropriate
- recording data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs
- using test results to make predictions to set up further comparative and fair tests
- reporting and presenting findings from enquiries, including conclusions, causal relationships and explanations of and a degree of trust in results, in oral and written forms such as displays and other presentations
- identifying scientific evidence that has been used to support or refute ideas or arguments

Topics covered:

Animals Including Humans, Everyday Materials (Properties and Changes of Materials), Living Things and their Habitats, Light, Forces and Magnets, Electricity, Earth and Space, Evolution.

Learner skills:

Critical thinking

CRITICAL THINKING

Organisation

Topic 7 Ecology RP7 – Measure population size (quadrats) Decomposition</p> <ul style="list-style-type: none"> RP10 – rate of decay of milk Impact of environmental change Trophic levels <p>Biomass</p> <ul style="list-style-type: none"> Food production 	Exam Prep	Exam Prep

CURIOSITY

COMPASSION

COURAGE

- potential difference
- Resistors
- Series and parallel circuits
- Domestic uses and safety
- Mains electricity
- Power
- Energy transfers in everyday appliances
- National Grid

Topic 3

- Density of materials
- Changes of state
- Internal energy
- Temperature changes in a system and specific heat capacity
- Changes of state and specific latent heat
- Particle motion in gases

Topic 5

- Work done
- Power
- Elasticity
- Moments, levers and gears

- Balancing by moles
- Limiting reagents
- % yield and atom economy
- Concentration (mol dm^{-3})
- Gas volumes

Topic 4

- Metal reactivity series
- Transition metals
- Metal extraction
- Oxidation
- Acids and alkalis
- RP8 Preparation of a pure, dry salt
- Electrolysis
- RP9/RP3 – Electrolysis
- Titration + RP2

Biology Paper 1

Topic 1

- Xylem and phloem specialisation
- STEM Cells – Cell differentiation
- Rate of diffusion
- Surface area to volume ratio
- Gills

- Photosynthesis
- RP5 – Pond weed photosynthesis
- Respiration

Biology Paper 2

Topic 5

- Homeostasis
- RP6 – Factors that affect human reaction time
- Hormonal coordination in humans (CB7)
- Mainlining temperature, water and nitrogen levels
- Plant hormones
- RP8 – effect of light and gravity on seedlings
- Uses of plant hormones

Topic 6

- Inherited disorders
- GM Crops
- Classification
- Advantages and disadvantages of sexual and asexual reproduction
- Cloning
- Speciation

Chemistry Paper 2
Topic 6
Reversible reactions
Dynamic equilibria
Le Chatelier Principles

- Cells and batteries

Fuel cells

Topic 7

- Amino acids
- DNA

Topic 8

Formulation

Pure substances

- States of matter (Topic 2)

Chromatography

- RP12/RP6 – Separating coloured substances
- Gas tests recap
- Flame tests and test for ions (RP7)

Topic 9

Global dimming

Topic 10

Life cycle assessments

- Potable water

RP13/RP8 – Purification of water

- Water waste
- Alternative methods for extracting metals

Corrosion

COURAGE

		Misconception: Elements and compound are the same				
Sequencing:	We have chosen this way to sequence the year 10 curriculum based on several factors. The specification has provided us with a route through that we felt strongly we wanted to follow. This sequence is based on building up the fundamental concepts taught in KS3 (year 7-9) to extend the students to GCSE and allows opportunities for retrieval, interleaving and spaced practice. The retrieval is a regular element in all lessons and focuses not just on last lesson but on last week, last month and last year. The interleaving and spaced practice is embed in the covering of concepts in a spiral motion, moving from Biology to Chemistry to Physics. The common aspects of the sciences are not taught in one block but are spaced out over the two years to maximise student learning and retrieval.					
Values	This scheme of work promotes the school values of Compassion, Curiosity and Courage by: Compassion – Acceptance of differing scientific models. Support of peers during feedback process' Curiosity – Asking scientific questions and focus on scientific investigations Courage – Review of prior learning and acting on feedback to bridge gaps within knowledge					
National Curriculum plus:	At GCSE, we offer the AQA specification which covers the National Curriculum in its entirety. We do, however, offer additional experiences such as a visit from Severn Trent to share their part in the cleaning of potable water as well as support provided through the wider school with reference to science careers.
