

Year 10 Biology 5: Homeostasis and Response Knowledge Organiser

1. Keywords	
Homeostasis	The regulation of the internal conditions of a cell or organism to maintain optimum conditions for function in response to inter- nal and external changes.
Optimum con- ditions	The perfect conditions for an organism to survive and grow. E.g. blood glucose level, body temperature and water level.
Nervous re- sponse	Uses electrical signal in nerves to make fast changes
Chemical re- sponse	Uses hormones in the blood to make changes.
Reflex arc	A nervous response that is fast and auto- matic for protection. Does not involve the conscious brain.
CNS	(Central nervous system) The brain and the spinal chord
Neurone	Nerve cell. Carries an electrical signal from one end to the other

3. Hormonal control: Endocrine system				
Endocrine system	A chemical response where glands secrete hormones into the blood which make changes around the body			
Glands	Special tissues designed to pro- duce specific chemical (hormones)			
Secrete	Release			

4. Major glands on the body							
1	Pituitary gland	The 'master gland' makes hor- mones which affect other glands causing them to secrete hor- mones					
2	Thyroid gland	Controls metabolism					
3	Adrenal gland	Makes adrenalin					
4	Pancreas	Controls blood sugar levels					
5	Ovary	Produces female sex hormones					
6	Testes	Produce male sex hormone					

2. Nervous system: Reflex arc								
No.	1	2	3	4	5	6	7	
Sec- tion	Stimulus	Receptor	Sensory neurone	Co- ordinator	Motor neu- rone	Effector	Response	
Defini- tion	A change to the envi- ronment that triggers a nervous response	A cell which detects a specific stimulus	A neurones which car- ries electri- cal signal from recep- tor to CNS	The area that re- ceives and processes the infor- mation	Neurone that con- nects the CNS to the effector	The organ that creates the correct response form the stimulus	The effect of the stimu- lus. Often designed to prevent injury	
Exam- ple	Touching a flame	Pain recep- tor in skin	Sensory neurone	Brain Relay neu- rone	Motor neu- rone	Muscle gland	Movement	

Year 10 Biology 5: Homeostasis and Response Knowledge Organiser

5. Control of blood glucose levels		7. Reproductive hormones			9. Contraception			
Type 1 diabe-	When the pancreas is damaged from	n infection and	Hormone	Made in	Function	Туре		How it works
tes Type 2 diabe-	When poor diet and obesity cause body cells to not respond to insulin anymore. Treated with diet and exercise		Testosterone Testes	Creates male sexual changes at puberty	Oral (the	e pill)	Stops FSH so no egg released	
tes					including sperm pro- duction	Injection/ implant		Release progester- one which prevents egg maturation for months or years
Insulin	Hormone made in pancreas that rec levels in the blood	Oestrogen	Ovary	Creates female sexual changes at puberty including ovulation				
glycogen	The long term store of sugar in the bo liver	Follicle stimulat-	Pituitary	Causes egg to mature	Barrier (condoms)		Prevent sperm and egg meeting	
6. Control of blood glucose continued (HT ONLY)			ing hormone (FSH)	gland	in ovary	Intrauterine (the coil)		Prevents embryo implanting
Glucagon	A hormone which reduces blood glucose concentra-		Luteinising hor- mone (LH)	Pituitary gland	Causes egg to be re- leased by ovary	Spermic	ides	Kill sperm
			Progesterone Ovary		Maintains lining of	Abstinence		Not having sex
Blood glucose increases		Blood glucose drops		Egg released	womb	Surgical (vasecte hystered	omy/ ctomy)	Surgically sterilising the adult perma- nently
Pancreas se- cretes insulin into blood		Pancreas se- cretes gluca- gon into blood	Menstruation Lining builds up Lining maintained Lining (menstruation)			10. Neg- ative feed- back	A system where the prod- uct reduces the stimulus to return the change to nor- mal levels	
glucose and turns it to gly- cogen		glycogen to glucose and releases it into blood stream				Adren alin	Fight c crease boosts gen a	or flight hormone. In- es heart rate and s blood supply of oxy- nd glucose
Normal blood glucose 8. Menstrual Cycle (HT only)			Day 1 Day 7	Day 14 Uterus lin	Day 21 Day 28 ing Progesterone	Thy- roxine	Contro and a develo by neg	ols metabolic rate ffects growth and opment. Controlled gative feedback.
