

What do I need to be able to do?

By the end of this unit you should be able to:

- Simplify any given ratio
- Share an amount in a given ratio
- Solve ratio problems given a part

Solutions should be modelled, explained and solved

Keywords

- Ratio: a statement of how two numbers compare
 Equal Parts: all parts in the same proportion, or a whole shared equally
 Proportion: a statement that links two ratios
 Order: to place a number in a determined sequence
 Part: a section of a whole
 Equivalent: of equal value
 Factors: integers that multiply together to get the original value
 Scale: the comparison of something drawn to its actual size

Representing a ratio

Order is Important

"For every dog there are 2 cats"

The ratio has to be written in the same order as the information is given

e.g. 2:1 would represent 2 dogs for every 1 cat ✗

Simplifying a ratio

"For every 6 days of rain there are 4 days of sun"

Cancel down the ratio to its lowest form

Find the biggest common factor that goes into all parts of the ratio

For 6 and 4 the biggest factor (number that multiples into them is 2)

"For every 3 days of rain there are 2 days of sun" - when this happens twice the ratio becomes 6:4

Ratio In (or n:1)

This is asking you to cancel down until the part indicated represents 1

Show the ratio 4:20 in the ratio of In

Units are important:

When using a ratio - all parts should be in the same units

Useful Conversions

Sharing a whole into a given ratio

James and Lucy share £350 in the ratio 3:4. Work out how much each person earns

Model the Question

James: Lucy
3:4

Find the value of one part

Whole: £350
7 parts to share between (3 James, 4 Lucy)

Put back into the question

Finding a value given In (or n:1)

Inside a box are blue and red pens in the ratio 5:1. If there are 10 red pens how many blue pens are there?

Model the Question

Blue: Red
5:1

□ - one part - 10 pens

Put back into the question

Ratio as a fraction

Trees: Flowers
3:7

There are 3 parts for trees

Fraction of trees

Number of parts of in group: 3

Total number of parts: 10

Tree parts 3 + Flower parts 7 = 10

π

The ratio of a circles circumference to its diameter
