

YEAR 9 RES MAT KNOWLEDGE ORGANISER

Finishes

Finishing Natural Timbers

Timbers can be treated with a number of surface finishes these include Paint, Stain, Wax & Varnish. Applying these finishes can:

- Seals the wood to protect the surface from heat and water
- Enhance the grain & surface
- To colour the surface

Finishing Manufactured Boards

Veneer
A sharp blade cuts very thin layers wood called veneer. A layer of veneer can be glued onto less expensive manufactured board to produce a more attractive finish and imitate natural timbers but maintain the properties of a manufactured board.

Lamination
This involves bonding by gluing strips of materials together in layers to create a strong structure. An example of this is wooden beams. If thinner materials are used for lamination the curves can be more complex

timber classification

Processing wood for use in manufacture

Stage 1 - Tree Felling

Stage 2 - Storage

Stage 3 - To Sawmill

Stage 4 - Rough Sawing

Stage 5 - Seasoning

Stage 6 - Cutting to Size

Stage 7 - Manufacturing

HARDWOODS

Hardwoods come from broad-leaved, deciduous trees.

SOFTWOODS

Softwoods come from coniferous trees which are evergreen, needle-leaved, cone-bearing trees, such as cedar, fir and pine

MANUFACTURED BOARDS

Manufactured boards are timber sheets which are produced by gluing wood layers or wood fibres together. Manufactured boards often made use of waste wood materials.

TYPES OF HARDWOOD

ash, beech, birch, cherry, elm, mahogany, oak, sapele and teak.

TYPES OF SOFTWOOD

cedar, fir, pine and spruce.

TYPES OF MANUFACTURED BOARD

plywood, chipboard, blockboard, medium density fibreboard (MDF), and hardboard.

Tools & equipment

HAND FILES

FRETSAW / SCROLL SAW

Tenon saw

Coping saw

Production methods

FINGER / COMB JOINTS

WHAT IS CAD / CAM?

CAD/CAM

INPUT, PROCESS, OUTPUT

2D CAD is still an important tool for commercial designers. Graphic design will always be a 2D activity and any project using a laser or knife-cutting CNC machine will need 2D data to work from. 2D shapes are always quick to machine - important in a classroom situation.

Rendering

Adding shade, texture & tone to make your design look realistic

Isometric drawing

Isometric drawing is way of presenting designs/drawings in three dimensions. In order for a design to appear three dimensional, a 30 degree angle is applied to its sides. The cube opposite, has been drawn in isometric projection.

Ergonomics & Anthropometrics

Anthropometrics are the measurements of the human body that are used by designers.
Ergonomics relates to the design of a product that functions well and is optimised for human use and interaction.
Custom products are designed as 'one-of-a-kind' and made for a specific client.

Scoring is the use of pressure along a line into sheet material in order to make it easier to fold.
Dimensions refer to sizes in a design.
Scale model is a physical representation of a product where sizes are proportionate.
