

# Year 10 Biology 5: Homeostasis and Response Knowledge Organiser

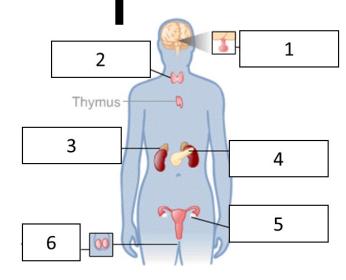

1. Keywords	
Homeostasis	The regulation of the internal conditions of a cell or organism to maintain optimum conditions for function in response to internal and external changes.
Optimum conditions	The perfect conditions for an organism to survive and grow. E.g. blood glucose level, body temperature and water level.
Nervous re- sponse	Uses electrical signal in nerves to make fast changes
Chemical response	Uses hormones in the blood to make changes.
Reflex arc	A nervous response that is fast and automatic for protection. Does not involve the conscious brain.
CNS	(Central nervous system) The brain and the spinal chord
Neurone	Nerve cell. Carries an electrical signal from one end to the other

3. Hormonal control: Endocrine system		
Endocrine system	A chemical response where glands secrete hormones into the blood which make changes around the body	
Glands	Special tissues designed to produce specific chemical (hormones)	
Secrete	Release	

2. Nervo	2. Nervous system: Reflex arc						
No.	1	2	3	4	5	6	7
Sec- tion	Stimulus	Receptor	Sensory neurone	Co- ordinator	Motor neu- rone	Effector	Response
Defini- tion	A change to the envi- ronment that triggers a nervous response	A cell which detects a specific stimulus	A neurones which car- ries electri- cal signal from recep- tor to CNS	The area that receives and processes the information	Neurone that con- nects the CNS to the effector	The organ that creates the correct response form the stimulus	The effect of the stimu- lus. Often designed to prevent injury
Exam- ple	Touching a flame	Pain recep- tor in skin	Sensory neurone	Brain Relay neu- rone	Motor neu- rone	Muscle gland	Movement

1 Pituitary gland The 'master gland' makes hormones which affect other glands causing them to secrete hormones  2 Thyroid gland Controls metabolism  3 Adrenal gland Makes adrenalin  4 Pancreas Controls blood sugar levels  5 Ovary Produces female sex hormones  6 Testes Produce male sex hormone	4.	4. Major glands on the body			
gland  3 Adrenal Makes adrenalin gland  4 Pancreas Controls blood sugar levels  5 Ovary Produces female sex hormones	1	,	mones which affect other glands causing them to secrete hor-		
gland  4 Pancreas Controls blood sugar levels  5 Ovary Produces female sex hormones	2	<i>'</i>	Controls metabolism		
5 Ovary Produces female sex hormones	3		Makes adrenalin		
, , , , , , , , , , , , , , , , , , ,	4	Pancreas	Controls blood sugar levels		
6 Testes Produce male sex hormone	5	Ovary	Produces female sex hormones		
	6	Testes	Produce male sex hormone		

## Year 10 Biology 5: Homeostasis and Response Knowledge Organiser

5. Control of blood glucose levels		
Type 1 diabe- tes	When the pancreas is damaged from infection and cannot make insulin. Needs injections to treat	
Type 2 diabe- tes	When poor diet and obesity cause body cells to not respond to insulin anymore. Treated with diet and exercise	
Insulin Hormone made in pancreas that reduces glucose levels in the blood		
glycogen	The long term store of sugar in the body. Made in the liver	

### 6. Control of blood glucose continued (HT ONLY)

Glucagon A hormone which reduces blood glucose concentration by turning it into glycogen

#### Normal blood glucose

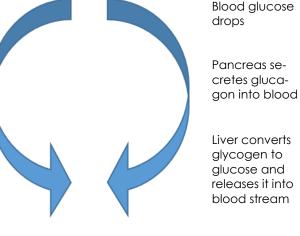

Normal blood glucose

Pancreas secretes insulin into blood

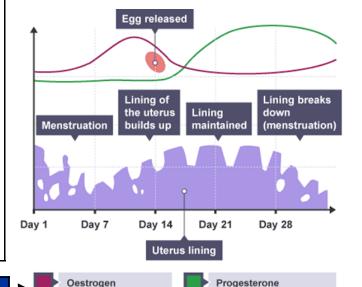

Liver absorbs glucose and turns it to glycogen

Blood glucose

increases

7. Reproductive hormones				
Hormone	Made in	Function		
Testosterone	Testes	Creates male sexual changes at puberty including sperm production		
Oestrogen	Ovary	Creates female sexual changes at puberty including ovulation		
Follicle stimulat- ing hormone (FSH)	Pituitary gland	Causes egg to mature in ovary		
Luteinising hor- mone (LH)	Pituitary gland	Causes egg to be re- leased by ovary		
Progesterone	Ovary	Maintains lining of womb		

9. Contraception		
Туре	How it works	
Oral (the pill)	Stops FSH so no egg released	
Injection/ implant	Release progester- one which prevents egg maturation for months or years	
Barrier (condoms)	Prevent sperm and egg meeting	
Intrauterine (the coil)	Prevents embryo implanting	
Spermicides	Kill sperm	
Abstinence	Not having sex	
Surgical (vasectomy/ hysterectomy)	Surgically sterilising the adult perma- nently	

10 Na		المام مالم ما	. /LIT	ONILVA
TU. NEC	Janve	feedback	$(\Pi\Pi)$	ONLI

Neg- ative feed- back	A system where the prod- uct reduces the stimulus to return the change to nor- mal levels
Adren alin	Fight or flight hormone. Increases heart rate and boosts blood supply of oxygen and glucose
Thy- roxine	Controls metabolic rate and affects growth and development. Controlled by negative feedback.

#### 8. Menstrual Cycle (HT only)
